# Kenwood adds to your pleasure... wherever you go

## TR-2200A

### A 2-METER STATION THAT GOES WHERE YOU GO

The high performance portable 2-meter FM transceiver endowed with Kenwood's characteristic high level of quality. The TR-2200A provides superior performance for the active outdoorsman... portable, mobile or airborne... pleasure or emergency. 12 channel capacity (6 supplied). Built-in telescoping antenna can be easily replaced by a "rubber duck" antenna (RA-1 option). Connection for external antenna. External 12 VDC or internal Ni-cad batteries. Battery-saving "light off" position. Hi-Lo power switch (2 watts-400 mW). Everything you need is included: batteries, charger, carrying case and microphone. Or mount it in your car as a mobile rig using an MB-1A mounting bracket (option).

## TR-7400A

Featuring Kenwood's New and Unique CONTINUOUS TONE CODED SQUELCH SYSTEM • 4 MHz BAND COVERAGE • 25 WATT OUTPUT • FULLY SYNTHESIZED, 800 CHANNELS

Outstanding sensitivity, large-sized helical resonators with High Q to minimize undesirable out-of-band interference, and a 2-pole 10.7 MHz monolithic crystal filter combine to give your TR-7400A outstanding receiver performance. This compact 6.2 pound package measures only 7-3/16" wide, 10-5/8" deep, and 2-7/8" high and is designed to

give you the kind of performance specifications you've always wanted to see in a 2-meter amateur rig. High performance specifications of: Intermodulation characteristics (Better than 66dB), spurious (Better than -60dB), image rejection (Better than -70dB), and a versatile squelch system make the TR-7400A tops in its class.

# ARRL REPEATER DIRECTORY 1977-78

## User Information

### JAMES MORRIS, KH6HQG; Editor

This *Repeater Directory*, published by ARRL, lists all repeaters that have been registered up to April 1, 1977. Repeaters are encouraged to be registered with ARRL annually for listing in the *Repeater Directory*. Register on the special registration card, CD85A, available on request from ARRL, 225 Main Street, Newington, CT 06111. To expedite receiving registration cards, please enclose an addressed stamped envelope. Only those repeaters that have been registered in 1977 or re-registered by April 1, 1978, and indicate a complete WR call, will be included in the next edition.

When re-registering, if the repeater call has changed since the previous listing, please indicate the former call on the registration card. This is important so that it will be obvious as to what information is changing. Repeaters are listed by band, then state and Canadian provinces. Information listed in the columns is:

Location.. Town, city or other geographical identification of the repeater location.

Area..... Section of the state or province in which the repeater is located - NOT necessarily the area covered by the repeater.

Call..... Call sign of the repeater. Call sign followed by an asterisk (\*) indicates a CLOSED repeater. Others are open.

Input.... Input frequency in MHz.

Output.... Output frequency in MHz.

Notes..... Repeater access is carrier-operated (C) unless indicated as such:

B = xxxkHz Burst required at the beginning of each transmission.

T = xxxkHz Touch-Tone code required to start repeater.

W = xxxkHz Whistle required to start repeater.

PL= Private Line, continuous sub-audible tone required. Standard EIA frequency codes in Hz:

67.0 - L1	79.7 - WB	94.8 - L5	114.8 - 2A	141.3 - 4A	167.9 - 6

ARRL VHF REPEATER ADVISORY COMMITTEE (VRAC)

The VRAC, a Board-authorized advisory group, provides a greater opportunity for direct participation in League affairs by the membership. It affords a more-organized way for members to register their ideas and their opinions.

The VRAC consists currently of 11 members appointed by the League president plus a Board liaison and a Headquarters staff member providing headquarters liaison. At this writing, the composition of the VRAC is as follows:

John A. Mason, W5NSQ, Chairman  
7727 La Risa Drive

Anyone considering the installation of a repeater should check with the frequency coordinator for his area. Coordinators are volunteers who keep extensive records of repeater input, output, and control frequencies, including those not published in directories at the request of the owners. The coordinator will advise on available frequencies for a proposed machine to hold interference with other repeaters and simplex channels to a minimum.

After consideration of input from many sources, ARRL, under guidance from the ARRL VHF Repeater Advisory Committee, adopted band plans for the use of the repeater segments at 50, 146, 222, and 450 MHz. The band plans are designed to make the best possible use of these frequencies within the technical constraints under which amateurs must operate. Several repeaters listed in this Directory do not conform to these plans. At this time, local coordination takes precedence over the national plan when the two are found to be in conflict. However, those repeaters whose frequencies have not been approved by the appropriate area frequency coordinators are listed here in the expectation that they will be changed to conform with the national and/or area standards in the near future.

450-MHz Band Plan

442.00 - 444.95	Repeater Outputs
445.00 - 446.95	Simplex, Aux links
446.00	National Simplex Frequency
447.00 - 449.95	Repeater Inputs

Notes: Repeater input/output spacing is 5 MHz, 50 kHz channel spacing. It is suggested that frequency coordinators do not assign 442.00 MHz as an output but start at 442.050 MHz. Because 442.00 is a subband edge, a repeater output on exactly 442.00 MHz could be in violation of the FCC rules if a portion of the signal extended below the center frequency.

50-MHz Band Plan

146-MHz Band Plan

1000 kHz spacing: 20 kHz channels

 frequency coordinator.

<sup>1</sup>The reserve frequencies listed are guard channels for the model radio control frequencies, every 100 kHz from 53.1 through 53.8 MHz. In the event that additional repeater channels are needed, these reserve channels could be allocated. For the present, it is suggested that frequency coordinators do not assign these channels.

# OSCAR — THE FAR OUT REPEATER

Height above average terrain: about 900 miles. Input on 2 meters, output on 10 meters. maximum usable range: nearly 5,000 miles!

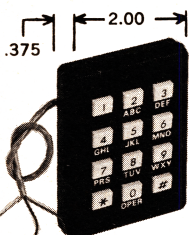

Sound like the ultimate repeater? This is not the dream of a super-rich repeater club, but the description of a functional "repeater," (more than one, in fact) in orbit around the earth.

OSCAR, Orbiting Satellite Carrying Amateur Radio, is a working communications satellite, designed, built and operated by amateur radio operators throughout the world. Two such satellites are in operation, with a third scheduled for launch soon. Each satellite receives signals in the 145.9-146.0 MHz range, and retransmits them in the ten meter band, around 29.5 MHz.

Getting started in satellite communication is easier than you think. See the popular series on OSCAR communications which began in January, 1977, *QST*, or write ARRL Hq. for further information. Don't be limited to terrestrial communications on 2 meters; talk to the world with your handi-talkie. See you on OSCAR.
