ARRL REPEATER DIRECTORY 1978-'79

Edited By Stan Horzepa, WA1LOU

User Information

Please note well: The *ARRL Repeater Directory* lists repeaters that have been registered after January 1, 1977 and before March 1, 1978. The repeater information compiled in this edition of the directory will be included in *all future* editions unless we receive information in regards to a change in the status of the repeater. In other words, if a repeater is listed in this edition, re-registration in the future is not necessary; only *new* repeaters need to register. However, please keep us informed as to any changes in the repeater information so that the directory can be kept accurate and current.

Repeater registration cards (CD-240) are available from ARRL, 225 Main St., Newington, CT 06111; including a self-addressed stamped-envelope will expedite reception of the cards. When registering a repeater that has a changed call sign, also include the old call letters to simplify our compilation.

In this edition, repeaters are listed by band, state/province, area and location. An explanation of the information compiled for each repeater follows.

Area — The primary coverage and service area within the repeater's state/province.

Location — Town, city or other geographical identification of the repeater's location.

Call — The FCC/DOC-assigned call letters of the repeater.

Input — Input frequency in MHz.

Output — Output frequency in MHz.

Sponsor — The sponsor of the repeater; either the name of an organization or the call letters of an individual.

Source — Call sign of the individual who provided the information with preferential listing of information provided by the repeater licensee or trustee.

Date — The date the information was submitted.

Notes — Access. How the repeater can be accessed: O — carrier-operated access; C — closed private repeater; Bxxxx — xxxx-Hz burst required to access repeater; Wxxxx — xxxx-Hz whistle required to access repeater; Txxxx — xxxx Touch-Tone™ required to access repeater; PLxxx — Private Line™, continuous sub-audible tone required to access repeater.

Other information: A — autopatch; E — emergency power; L — link and/or crossband; R — RACES; P — portable; Y — afsk RTTY; Z — direct access to law enforcement.

Frequency Coordination — If a dot (•) follows a repeater's call letters, it indicates that, according to the frequency coordinator of that repeater's locale, the repeater's frequencies have not been coordinated.

STILL THE SAME FINE, TIME PROVEN RIG. BUT NOW WITH THE SIMPLE ADDITION OF A PLUG-IN CRYSTAL, THE TS-700SP WILL BE ABLE TO UTILIZE THE NEW REPEATER SUB-BAND WHEN IT BECOMES AVAILABLE. STILL FEATURES ALL OF THE FINE ATTRIBUTES OF THE TS-700S: A DIGITAL FREQUENCY DISPLAY, RECEIVER PRE-AMP, VOX, SEMI-BREAK IN, AND CW SIDETONE. OF COURSE, IT'S ALL MODE, 144-148 MHZ, VFO CONTROLLED ... AND KENWOOD QUALITY THROUGHOUT.

Features: 4 MHz band coverage (144 to 148 MHz) • Repeater offset capability on all FCC authorized repeater sub-bands including 144.5-145.5 MHz • Operates all modes: SSB (upper and lower), FM, AM and CW • Digital readout with "Kenwood Blue" digits • Receiver pre-amp • 1 watt low power switch • Built-in VOX • Semi break-in on CW • CW sidetone • Completely solid state circuitry provides stable, long lasting, trouble-free operation • AC and DC capability (operate from your car, boat, or as a base station through its built-in power supply) • Automatically switches transmit frequency 600 kHz for repeater operation. Simply dial in your receive frequency and the radio does the rest... simplex, repeater, reverse • Or accomplish the same by plugging a single crystal into one of the 11 crystal positions for your favorite channel • Transmit/Receive capability on 44 channels with 11 crystals.

FREQUENCY COORDINATORS

Frequency coordinators are volunteers who keep extensive records of repeater input, output and control frequencies, including those not published in directories (at the owners' request). The coordinator will recommend frequencies for a proposed repeater in order to minimize interference with other repeaters and simplex frequencies. Therefore, anyone considering the installation of a repeater should check with the frequency coordinator for his area.

The following is a compendium of frequency coordinators in the United States and Canada.

AMCOMM has a new recipe.

Just look at the ingredients!

If you have an appetite for real performance in a mobile two meter transceiver, look to the cuisine of AMCOMM. The S 2 25 digital synthesized transceiver is now on the menu. Designed and manufactured in the USA by Americans, many of whom are amateurs, it's composed of ingredients that are par excellence. Displayed by six 7 segmented LED's, any of 800 frequencies in 5 KHz steps are **accessible**. The transmitter is phase modulated and adjustable to a 15 KHz deviation. Receiver frequency can be offset by + or - 600 Kz or + or - 1 MHz. Flavoring is added by a signal/power meter, sensitivity rated .5uv or better, for 20 dB quieting with a master oscillator fre-

quency stability of + or - 5 ppm. Like the gourmet meal, all this results in a very special product. There's lots more, so see the All-American S 2 25 at your AMCOMM dealer, or write for our new brochure.

The S 2 25. To know it is to love it.

BAND PLANS

After consideration of input from various sources, the ARRL, under the guidance of its VHF Repeater Advisory Committee, adopted band plans for the use of the repeater segments of 146 and 222 MHz. The plans are designed to make the best possible use of these frequencies within the technical constraints under which amateurs must operate.

Several repeaters listed in this directory do not conform to these plans, but they have been included in the expectation that they will be changed to conform with the national and/or area standards in the near future.

As of this writing, the VRAC has not completed voting on a 29 MHz band plan. Currently, the predominant spacing is 20 kHz with 100 kHz input/output frequency splits. The VRAC's 450-MHz band plan is no longer usable because the FCC's recent rule changes have realigned the available repeater spectrum from 420-450 MHz to 431-433 MHz and 435-438 MHz. Further details will appear in a future issue of QST.

IC-215 FM PORTABLE/MOBILE

- 15 channels (12 on dial/3 priority)
- Fully collapsible antenna or "rubber duck"
- Compatible mount for mobile operation
- Dual power (3 watts high/400mw low)
- External power and antenna easily accessible for mobile operation
- Lighted dial and meter
- Double-size, long-lasting internal batteries with optional Ni-Cd pack and charger available

ICOM's IC-215 is the FM radio that puts good times on the go. Now an outstanding mobile mount and quick-change features for external power, speaker and antenna conversions make moving from base, to vehicle, to hill top fast and easy; and the IC-215 portable/mobile provides continuous contact for even the busiest FM enthusiast.

The IC-215's three narrow filters provide quality not usually found in portable VHF equipment. With 15 channel capacity and an MOS FET RF amp with 5 tuned circuits in the front end, the IC-215 gives optimum FM portable performance.

You'll be carrying quality, performance and versatility with your IC-215 FM portable/mobile.

This new mobile mount is now available for your IC-215. Fast insertion and removal is a snap, and the mount is collapsible when not in use.

Specifications: Frequency Range: 146-148 MHz Voltage: 13.8 VDC negative ground Size: 183mm(h) x 61mm(w) x 162mm(d)
 Weight: 1.9 kg Number of Channels: 15 total, 12 on main switch, 3 priority Power Output: 3.0 W or 0.5 W Microphone Impedance: 600 ohms Spurious Level: lower than -60 dB Receiver Sensitivity: 4 dB below 1 UV or lower Spurious Response: 60 dB or better

All ICOM radios significantly exceed FCC specifications limiting spurious emissions.

use with
the ICOM IC-22S

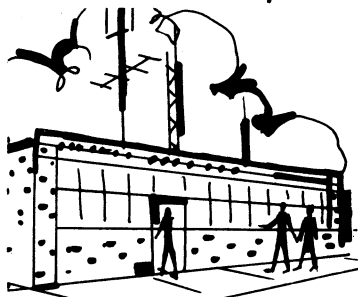

Now you can scan the entire 146-147 MHz band in seconds and find all the activity anywhere, anytime. The SPEC-SCAN-DIGITAL PROGRAMMABLE SCANNER adapts the ICOM IC-22S to make it a virtual "electronic repeater directory."

It scans the entire 146-147 MHz band in 15 KHz steps, automatically, or manually. Automatically reads out your other 21 channels when they are used. Can be used as a remote programming unit with the radio hidden under the seat, etc. Exclusive VARI-SCAN™ control allows full control of scan rate in either direction! Full compatibility with the duplex mode. Uses state-of-the-art CMOS logic. Low current drain, less than 500 mA. RF immune.

Full Coverage of Repeater Rules and Regulations

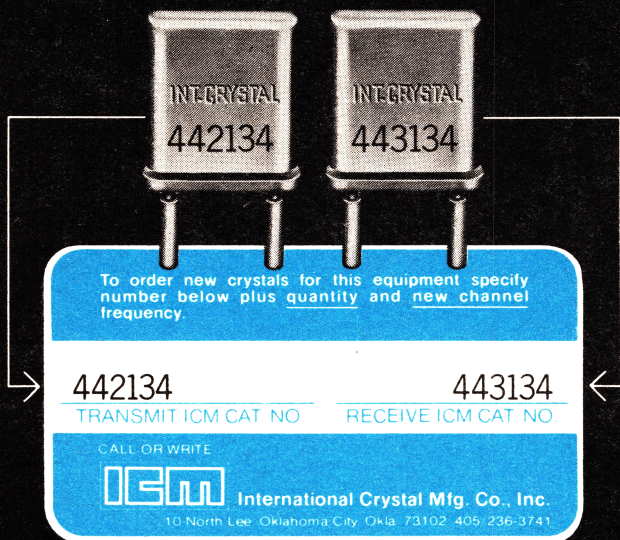

The *License Manual* tells you what you must do to pass the government examinations, and how to do it. In addition to a large amount of general information, and the complete up-to-date amateur regulations, it contains questions and answers such as are asked in the FCC examinations for Technician, Conditional, General, Advanced, and Extra Classes of amateur license. If you know the answers to the questions in this book, you can pass the examination without trouble.

Larsen

the coolest antenna in town gives you the hottest performance!

Since the first Larsen Antenna was introduced some 15 years ago, this basic fact has not changed: **Larsen Mobile Antennas are designed and built to outperform.**

With the introduction of the Larsen exclusive Kūlrod Antenna, this superior performance is a fact more than ever. We suggest that you make this simple test:

Take any antenna other than a Larsen . . . one with a regular unplated stainless steel whip. Apply a good husky signal to it . . . 100 watts, for, say, a full minute. Then, power off, feel the antenna. Careful! Burn blisters aren't pleasant.

Next . . . try a Larsen Kūlrod Antenna. Put it to the same test.

Amazing isn't it!

That's our story. Heat means power . . . power not radiated. With the Larsen Kūlrod, power goes into communicating instead of heating the antenna. That's why you can **HEAR the difference.**

Larsen Antennas are available to fit all styles of mounts and to cover Amateur frequencies from 6 meters through 450 MHz. Write for complete catalog and list of dealers nearest you.
