FOREWORD

This new 39th edition of the *ARRL Repeater Directory* contains information provided by frequency coordinators through early February 2010. These dedicated amateurs volunteer their services and strive to provide interference-free operation and we all appreciate their contributions. Without these coordinators, the *Repeater Directory* could not exist.

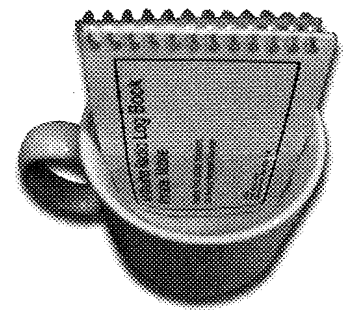

We depend on reader suggestions to improve each edition. It was reader feedback that brought the separate D-STAR and APCO 25 sections. Reader feedback also resulted in the EchoLink, IRLP and WIRES-II listings. If you have more suggestions for future *Directories*, please let us know. You can simply drop an e-mail message to **pubsfdbk@arrl.org.**

ANNUAL UPDATE INFORMATION

This edition of the *Repeater Directory* has been completely revised. Updates were received from all coordinators recognized by the National Frequency Coordinators' Council (NFCC) throughout the United States and Canada. In the few areas, noted throughout the book, served by a coordinator not recognized by the NFCC, information was provided by coordinating bodies seeking NFCC recognition.

FOREIGN LISTINGS

Listings outside the United States and Canada have been moved to ARRL's comprehensive reciprocal licensing Web site. ARRL welcomes the submission of additional foreign listings. Overseas travelers should refer to **www.arrl.org/international-regulatory**

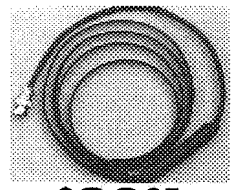

MFJ *VHF/UHF* Headquarters

. . . the world's largest assortment of ham accessories!

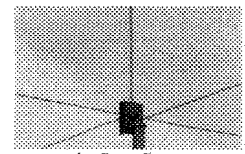

$39.95

MFJ-1702C
2-Position coaxial switch, lightning surge protection, center ground. SWR below 1.2:1, SO-239.

$29.95

MFJ-1730
Pocket Roll-up 1/2 Wave 2-Meter antenna easily fits in pocket.

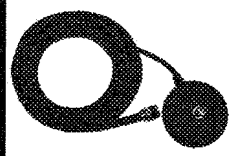

$34.95

MFJ-1750
2-Meter, *high-gain* 5/8 Wave ground plane *base* antenna. Single U-bolt mount.

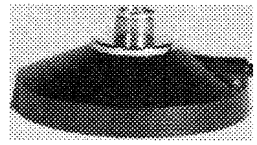

$19.95

MFJ-310/S
Extend your range! Put HT antenna outside car with MFJ *mobile window mount.* 10' coax, BNC *or* SMA.

$19.95

MFJ-332B/S
Talk further with outside HT ant. mag mount, 2¾"dia, 12' coax, BNC *or* SMA.

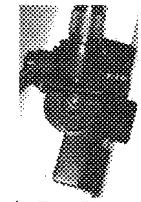

$21.95

MFJ-335BS
Super-strong 5-inch Magnet mount. 17' coax. For antennas with PL-259.

$39.95

MFJ-336S/M/T
Ultra-strong 5" *tri*-mag mount. Select SO-239, NMO, 3/8x24 ant. 17' coax.

$34.95

MFJ-345S
Trunk lip SO-239 Mount with 14 ft. coax, rubber guard.

$19.95

MFJ-1722
UltraLite™ 144/440 MHz mag mount mobile antenna, strong 1⅛"dia. 2 oz. magnet, thin 20" whip, 12 ft. coax.

$44.95

MFJ-1734
Glass mount 144/440 MHz. *High gain* 26" stainless radiator, low SWR, 50 Watts. 12 ft. coax.

$16.95

MFJ-1714
Long Ranger™ 1/2-wave 2-Meter HT Ant. 40" extended! 10½" collapsed. Ultra long range -- *outperforms a 5/8 Wave!*

$49.95

MFJ-1422
RuffRider™ *Hi-gain*™ 41½" deluxe mobile antenna has super gain on 2-Meters and ultra-high gain on 440 MHz. 150W, pl-259.

CHAPTER ONE

GENERAL INFORMATION

This chapter will address repeater operating practices, give you a few user notes, and discuss what to do if your repeater experiences jamming. A section listing CTCSS tone frequencies is also included for your information.

Repeater Operating Practices

The following suggestions will assist you in operating a repeater "like you've been doing it for years."

1) Monitor the repeater to become familiar with any peculiarities in its operation.

2) To initiate a contact simply indicate that you are on frequency. Various geographical areas have different practices on making yourself known, but, generally, "This is NUØX monitoring" will suffice. Please don't "ker-chunk" (key up without identifying yourself) the repeater "just to see if it's working."

3) Identify legally; you must identify at the end of a transmission or series of transmissions and at least once each 10 minutes during the communication.

4) Pause between transmissions. This allows other hams to use the repeater (someone may have an emergency). On most repeaters a pause is necessary to reset the timer.

5) Keep transmissions short and thoughtful. Your "monologue" may prevent someone with an emergency from using the repeater. If you talk long enough, you may actually time out the repeater. Your transmissions are being heard by many listeners, including non-hams with "public service band" monitors and scanners. Don't give a bad impression of our service.

6) Use simplex whenever possible. If you can complete your QSO on a direct frequency, there is no need to tie up the repeater and prevent others from using it.

7) Use the minimum amount of power necessary to maintain communications. This FCC regulation [97.313(a)] minimizes the possibility of accessing distant repeaters on the same frequency.

8) Don't break into a contact unless you have something to add. Interrupting is no more polite on the air than it is in person.

9) Repeaters are intended primarily to facilitate mobile operation. During the commuter rush hours, base stations should relinquish the repeater to mobile stations; some repeater groups have rules that specifically address this practice.

10) Many repeaters are equipped with autopatch facilities which, when properly accessed, connect the repeater to the telephone system to provide a public service. The FCC has liberalized Part 97.113 regarding business communications by amateurs. Amateur operators may not accept compensation for the use of their radios. Under certain conditions, however, the radio/autopatch can be utilized to make appointments and order items. This, though, is a decision that is made by the local repeater owner, so check with yours before making such calls. Autopatch facilities should never be
used to avoid a toll call or where regular telephone service is available. Remember, autopatch privileges that are abused may be rescinded.

11) All repeaters are assembled and maintained at considerable expense and inconvenience. Usually an individual or group is responsible, and those who are regular users of a repeater should support the efforts of keeping the repeater on the air. Repeater owners may restrict individuals from using their machines, and the FCC expects users to comply with these restrictions. See Section 97.205(e) of the FCC's rules.

USER INFORMATION

Except where noted, repeaters are listed according to their Geographic Area (metropolitan area or county). There are, however, some state Frequency Coordinators who prefer to list their systems alphabetically by location.

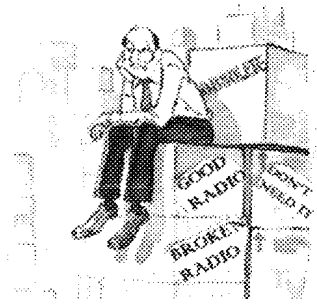

This directory lists private (closed) repeater systems as well as open systems. Many private systems, including repeaters, remote bases, control and link channels are in properly coordinated operation on authorized frequencies but are not included in this directory. This is especially common on the 220 and MHz bands, commonly utilized for linking and/or remote con-trol systems. Please consult your Frequency Coordinator for their recommendations for operating frequencies on new repeaters, remote bases or control links.

With an increase in the number of reports of repeater-to-repeater interference, the FCC is placing more emphasis on repeaters being coordinated. Repeater coordination is an example of voluntary self-regulation within the Amateur Service. Non-coordinated repeater operation may imply non-conformance with locally recognized band plans (eg, an unusual frequency split) or simply that the repeater trustee has not yet applied for, or received "official" recognition from the Frequency Coordinator. Known non-coordinated repeaters are indicated in this directory with a pound sign (#) in the Notes field. This symbol does not indicate anything about the relative merit of any particular repeater.

PLEASE NOTE: It is the responsibility of the TRUSTEE to provide the Frequency Coordinator with annual updates for inclusion in the *ARRL Repeater Directory*. Most coordination organizations have their own criteria for annual updates.

REPEATER-TO-REPEATER INTERFERENCE

In an effort to resolve repeater-to-repeater interference complaints, FCC has adopted the following rules. Where an amateur radio station in repeater or auxiliary operation causes harmful interference to the repeater or auxiliary operation of another amateur radio station, the two are equally and fully responsible for resolving the interference unless one station's operation is coordinated and the other's is not. In that case, the station engaged in the non-coordinated operation has primary responsibility to resolve the interference. See Sections 97.201 (c) and 97.205 (c) of the Commission's Rules.

REPEATER JAMMERS AND THE LOCAL INTERFERENCE COMMITTEE

Interference on VHF or UHF repeaters is primarily a local problem requiring local resolution. This kind of problem varies from non-existent in some parts of the country to extremely serious in others. The Amateur Auxiliary mechanism for dealing with any local amateur-to-amateur interference (primarily on VHF) is the local interference committee. The philosophy of the committee approach to solving this type of problem was provided in 1980 by the ARRL Interference Task Force. Many repeater groups have already successfully established local interference committees, some employing very sophisticated methods. The committee approach to solving this type of problem and Public Law 97-259 have proven most effective.

The Amateur Auxiliary incorporates this program of local interference committees into its comprehensive program of dealing with all types of amateur variations with the regulations. Since the ARRL Field Organization is the focus

of Amateur Auxiliary involvement as recognized by agreement with FCC, the local interference committee now comes within the purview of the Section Manager's overall Amateur Auxiliary program. The local interference committee gains official standing through the Section Manager. It is, in effect, a "group appointment" of the Section Manager, for specific authorization to deal with local problems of amateur-to-amateur interference. Thus the local interference committee plays a crucially important role in the make-up of the Amateur Auxiliary.

For more information on local interference committees, Amateur Auxiliary and the ARRL Field Organization, contact your ARRL Section Manager, or the *Field and Educational Services Department* at ARRL HQ.

NOTES AND SPECIAL FEATURES

What follows is a discussion of some of the specialized features used in repeater listings in the Directory.

LOCATION — The city, town, or site at which a repeater is located.

OUTPUT — The output frequency in megahertz.

INPUT — The frequency offset (difference between input and output frequencies). Either a (+) or (–). A frequency printed in the input field indicates a "non-standard" offset.

Standard offsets by band:

29 MHz	- 100 kHz
52 MHz	- VARIOUS
144 MHz	- 600 kHz
222 MHz	- 1.6 MHz
440 MHz	- 5 MHz
902 MHz	- 12 MHz
1240 MHz	- 12 MHz

CALL — The call sign of the repeater.

NOTES — How the repeater may be accessed and other specialized features are indicated by the following abbreviations:

- # - Uncoordinated System
- o - Open system
- Bi - Bi-lingual system
- c - Closed, limited access system
- LiTZ - (Ltz) Long-Tone Zero. Used to alert users to an emergency in some areas of the country. A more in-depth discussion of LiTZ systems and their usage follows later in this chapter.
- t - Tone-Access (CTCSS tone) required to access the system.
- TT - Touch-Tone® access to specialized features
- RB - Remote Base (Auxiliary)

SNP - Shared Non-Protected pair. In some areas there are repeater frequencies listed as SNP. These frequencies are intended to provide spectrum for experimental repeaters, search and rescue operations, portable public service systems and to act as a holding place for repeaters awaiting coordination. Users of SNP frequencies do so under the following guidelines:

1) The frequencies are shared by all users.
2) Operators receive no protection from other co-channel users.
3) All systems use CTCSS or other approved method of limited access.
4) The frequency coordinator shall coordinate the CTCSS tones.

SPECIALIZED FEATURES:

a	- autopatch
(CA)	- closed autopatch
e	- emergency power
E-SUN	- solar power
E-WIND	- wind power
l	- linked or crossband system
p	- portable system
PKT	- digital/packet capability
r	- RACES affiliated
s	- ARES affiliated
x	- wide area coverage system
y	- RTTY/ASCII system
z	- direct access to law enforcement
WX	- weather net/weather usage
EXP	- experimental system

SPONSOR — The sponsor of the repeater. Plus (+) sign indicates the listed call plus additional calls sponsor the repeater.

NOTE: Listings of two CTCSS tones in the notes field indicates both the input and output are tone encoded.

HI PRO REPEATERS

Hi Pro "R1" Repeater

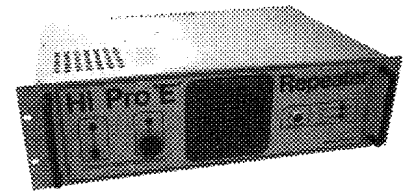

144 MHz, 222 MHz or 440 MHz

Here is a compact **LOW COST** repeater (less controller) priced at just $899. A 35 watt VHF (2-meter) repeater with a computer controller, voice synthesizer, auto patch, auto dialers, user functions, etc is priced at $1,379. This is not a kit, but a complete repeater with a two-year warranty. 222 and 440 MHz versions are also available!

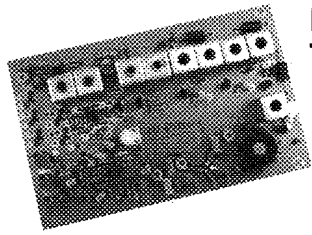

Hi Pro "E" Repeater

144 MHz, 222 MHz or 440 MHz

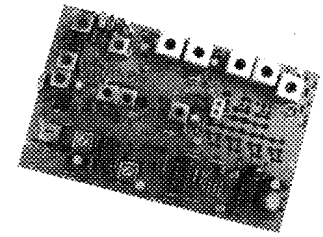

The Hi Pro "E" is the choice if you need a repeater with a built-in power supply, plus room for an extra receiver, transmitter, small duplexer and controller. The front panel provides status indicator lights, a speaker, a microphone connection, control switches, etc. Prices start at just $1,450!

If you need a receiver or transmitter as a board or in an enclosure, we can provide them. These are the same high-performance units that are used in all of our repeaters. All have our new QUALITY AUDIO AND STABLE OSCILLATORS.

EV1 VHF Transmitter

RV4 VHF Receiver

LiTZ OVERVIEW

Mutual Assistance Procedures for VHF/UHF FM
Brief Overview for ARRL Repeater Directory
By: Paul Newland, AD7I
35 Barrister Lane
Middletown, NJ 07748
ad7i@arrl.net

Introduction

One of the great features of Amateur Radio is it gives hams the ability to provide mutual assistance to one another. There are two common procedures currently in place for mutual assistance on VHF/UHF FM frequencies. The first is "LiTZ," a DTMF (Touch-Tone) based all-call priority alerting system. The second is the "Wilderness Protocol".

LiTZ (i - added to make it easier to pronounce)

LiTZ is a simple method to indicate to others on an amateur VHF/UHF FM radio channel that you have an immediate need to communicate with someone, anyone, regarding a priority situation or condition.

LiTZ stands for LONG TONE ZERO. The LiTZ signal consists of transmitting DTMF (Touch-Tone) Zero for at least 3 seconds. After sending the LiTZ signal the operator announces by voice the kind of assistance that is needed. For example:
(5-seconds-DTMF-zero) "This is KA7BCD. I'm on Interstate 5 between mile posts 154 and 155. There's a 3 car auto accident in the southbound lane. Traffic has been completely blocked. It looks like paramedics will be needed for victims. Please respond if you can contact authorities for help. This is KA7BCD."

If your situation does not involve safety of life or property, try giving a general voice call before using LiTZ. Use LiTZ only when your voice calls go unanswered or the

people who respond can't help you.

When you see the notation "LiTZ" for a repeater in this directory that means that it's highly likely that someone will receive and respond to LiTZ signals transmitted on the input frequency of the repeater. Please note, however, that if a CTCSS tone is needed to access that repeater you should transmit that CTCSS tone along with your LiTZ signal.

The type and nature of calls that justify the use of LiTZ may vary from repeater to repeater, just as other uses vary. Here are some general guidelines that may be suitable for most repeaters and simplex calling channels. Items with a star (*) should be acceptable on any frequency at any time.

LiTZ Use Guidelines

Event/Situation	*Waking Hours (0700-2200 LT)*	*Sleeping Hours (2200-0700 LT)*
Calling CQ	no	no
Calling a buddy	no	no
Weekly Test of LiTZ	yes	no
Club Message	yes	no
Need Driving Directions	yes	no
Report Drunk Driver	yes	yes
Car Break Down	yes	yes
Safety of Life or Property	yes	yes

For more information on LiTZ and LiTZ decoders refer to *QST* (Oct 92, page 82; Nov 92, pages 108-110; Dec 95, pages 25-31).

Wilderness Protocol

The Wilderness Protocol is a suggestion that those outside of repeater range should monitor standard simplex channels at specific times in case others have priority calls. The primary frequency is 146.52 MHz, with 52.525, 223.5 446.0 and 1294.5 MHz serving as secondary frequencies. This system was conceived to facilitate communications between hams that were hiking or backpacking in uninhabited areas, outside repeater range. However, the Wilderness Protocol should not be viewed as something just for hikers. It can (and should) be used by everyone anywhere repeater coverage is unavailable. The protocol only becomes effective when many people use it.

The Wilderness Protocol recommends that those stations able to do so should monitor the primary (and secondary, if possible) frequency every three hours starting at 7 AM, local time, for 5 minutes (7:00-7:05 AM, 10:00-10:05 AM, ..., 10:00-10:05 PM). Additionally, those stations that have sufficient power resources should monitor for 5 minutes starting at the top of every hour, or even continuously.

Priority transmissions should begin with the LiTZ signal. CQ-like calls (to see who is out there) should not take place until four minutes after the hour.

For more information on the Wilderness Protocol refer to *QST* (Feb 94, page 100; Apr 94, pages 109; May 94, pages 103-104.).

CTCSS AND DCS INFORMATION

The purpose of CTCSS (PL)™ is to reduce co-channel interference during band openings. CTCSS (PL)™ equipped repeaters respond only to signals having the sub-audible CTCSS tone required for that repeater. These repeaters do not retransmit distant signals without the required tone, and congestion is minimized.

The standard Electronic Industries Association (EIA) tones, in hertz, with their Motorola alphanumeric designators are as follows:

67.0 - XZ	97.4 - ZB	141.3 - 4A	210.7 - M2
69.3 - WZ	100.0 - 1Z	146.2 - 4B	218.1 - M3
71.9 - XA	103.5 - 1A	151.4 - 5Z	225.7 - M4
74.4 - WA	107.2 - 1B	156.7 - 5A	233.6 - M5
77.0 - XB	110.9 - 2Z	162.2 - 5B	241.8 - M6
79.7 - WB	114.8 - 2A	167.9 - 6Z	250.3 - M7
82.5 - YZ	118.8 - 2B	173.8 - 6A	
85.4 - YA	123.0 - 3Z	179.9 - 6B	
88.5 - YB	127.3 - 3A	186.2 - 7Z	
91.5 - ZZ	131.8 - 3B	192.8 - 7A	
94.8 - ZA	136.5 - 4Z	203.5 - M1	

Some systems use tones not listed in the EIA standard. Motorola designators have been assigned to the most commonly used of these tones: 206.5 (8Z), 229.1 (9Z), and 254.1 (0Z). Some newer amateur transceivers support additional tones of 159.8, 165.5, 171.3, 177.3, 183.5, 189.9, 196.6 and 199.5 hertz.

Some newer amateur gear supports Digital Code Squelch (DCS), a similar form of access control less susceptible to false triggering than CTCSS. DCS codes are designated by three digit numbers and are enabled in a manner similar to CTCSS tones.

Those wishing to use a CTCSS or DCS equipped system should check equipment specifications prior to purchase to ensure capability for the specified tone(s) or code(s).

CHAPTER TWO

BAND PLANS

This chapter will address band plans. These exist only as "traffic control" devices, allowing the most efficient use of limited spectrum space and varied amateur interests. The band plans published herein were developed by ARRL. Also discussed are the Line "A" restrictions, and a map delineating repeater offsets is provided.

Although the FCC rules set aside portions of some bands for specific modes, there's still a need to further organize our space among user groups by "gentlemen's agreements." These agreements, or band plans, usually emerge by consensus of the band occupants, and are sanctioned by a national body like ARRL. For further information on band planning, please contact your ARRL Division Director (see any issue of *QST*).

VHF-UHF BAND PLANS

When considering frequencies for use in conjunction with a proposed repeater, be certain that both the input and output fall within subbands authorized for repeater use, and do not extend past the subband edges. FCC regulation 97.205(b) defines frequencies which are currently available for repeater use.

For example, a 2-meter repeater on exactly 145.50 MHz would be "out-of-band," as the deviation will put the signal outside of the authorized band segment.

Packet-radio operations under automatic control should be guided by Section 97.109(d) of the FCC Rules.

Regional Frequency Coordination

The ARRL supports regional frequency coordination efforts by amateur groups. Band plans published in the ARRL Repeater Directory are recommendations based on a consensus as to good amateur operating practice on a nationwide basis. In some cases, however, local conditions may dictate a variation from the national band plan. In these cases, the written determination of the regional frequency coordinating body shall prevail and be considered good amateur operating practice in that region.

28.000-29.700 MHz

Please note that this bandplan is a general recommendation. Spectrum usage can be different depending upon local and regional coordination differences. Please check with your Frequency Coordinator for information.

28.000 – 28.070	CW
28.070 – 28.150	Data/CW
28.120 – 28.189	Packet/Data/CW
28.190 – 28.225	Foreign CW Beacons
28.200 – 28.300	Domestic CW Beacons (*)
28.300 – 29.300	Phone
28.680	SSTV
29.300 – 29.510	Satellites
29.510 – 29.590	Repeater Inputs
29.600	National FM Simplex Frequency
29.610 – 29.690	Repeater Outputs

*User note: In the United States, automatically controlled beacons may only operate on 28.2-28.3 MHz [97.203(d)].

In 1980, the ARRL Board of Directors adopted the following recommendations for CTCSS tones to be voluntarily incorporated by 10 meter repeaters:

Call Area	*Tones*	*Call Area*	*Tones*
W1	131.8/91.5	W7	162.2/110.9
W2	136.5/94.8	W8	167.9/114.8
W3	141.3/97.4	W9	173.8/118.8
W4	146.2/100.0	W0	179.9/123.0
W5	151.4/103.5	VE	127.3/88.5
W6	156.7/107.2		

The following band plan for 6 meters was adopted by the ARRL Board of Directors at its July, 1991 meeting.

50-54 MHz

Please note that this bandplan is a general recommendation. Spectrum usage can be different depending on location and regional coordination differences. Please check with your Frequency Coordinator for information.

50.0-50.1 CW, beacons
- 50.060-50.080 beacon subband

50.1-50.3 SSB,CW
- 50.10-50.125 DX window
- 50.125 SSB calling

50.3-50.6 all modes

50.4 AM calling frequency

50.6-50.8 nonvoice communications
- 50.62 digital (packet) calling

50.8-51.0 radio remote control (20-kHz channels)

NOTE: Activities above 51.10 MHz are set on 20-kHz-spaced "even channels"

51.0-51.1 Pacific DX window

51.5-51.6 simplex (6 channels)

51.12-51.48 repeater inputs (19 channels)
- 51.12-51.18 digital repeater inputs

51.62-51.98 repeater outputs (19 channels)
- 51.62-51.68 digital repeater outputs

52.0-52.48 repeater inputs (except as noted; 23 channels)
- 52.02, 52.04 FM simplex
- 52.2 TEST PAIR (input)

52.5-52.98	repeater output (except as noted; 23 channels)
52.525	primary FM simplex
52.54	secondary FM simplex
52.7	TEST PAIR (output)
53.0-53.48	repeater inputs (except as noted; 19 channels)
53.0	base FM simplex
53.02	simplex
53.1, 53.2, 53.3, 53.4	radio remote control
53.5-53.98	repeater outputs (except as noted; 19 channels)
53.5, 53.6	radio remote control
53.7, 53.8	
53.52-53.9	simplex

Notes: The following packet radio frequency recommendations were adopted by the ARRL Board of Directors in July, 1987.

Duplex pairs to consider for local coordination for uses such as repeaters and meteor scatter:

50.62-51.62	50.68-51.68	50.76-51.76
50.64-51.64	50.72-51.72	50.78-51.78
50.66-51.66	50.74-51.74	

Where duplex packet radio stations are to be co-existed with voice repeaters, use high-in, low-out to provide maximum frequency separation from low-in, high-out voice repeaters.

144-148 MHz

Please note that this bandplan is a general recommendation. Spectrum usage can be different depending on location and regional coordination differences. Please check with your Frequency Coordinator for information.

144.00-144.05	EME (CW)
144.05-144.10	General CW and weak signals
144.10-144.20	EME and weak-signal SSB
144.200	SSB calling frequency
144.20-144.275	General SSB operation
144.275-144.300	Propagation beacons
144.30-144.50	OSCAR subband
144.50-144.60	Linear translator inputs
144.60-144.90	FM repeater inputs
144.90-145.10	Weak signal and FM simplex (145.01,03,05,07,09 are widely used for packet radio)
145.10-145.20	Linear translator outputs
145.20-145.50	FM repeater outputs
145.50-145.80	Miscellaneous and experimental modes
145.80-146.00	OSCAR subband
146.01-146.37	Repeater inputs
146.40-146.58	Simplex (*)
146.52	National Simplex Calling Frequency
146.61-147.39	Repeater outputs
147.42-147.57	Simplex (*)
147.60-147.99	Repeater inputs

NOTES: (*) Due to differences in regional coordination plans the simplex frequencies listed may be repeater inputs/outputs as well. Please check with local coordinators for further information.

1) Automatic/unattended operations should be conducted on 145.01, 145.03, 145.05, 145.07 and 145.09 MHz.

a) 145.01 should be reserved for inter-LAN use.

b) Use of the remaining frequencies should be determined by local user groups.

2) Additional frequencies within the 2-meter band may be designated for packet radio use by local coordinators.

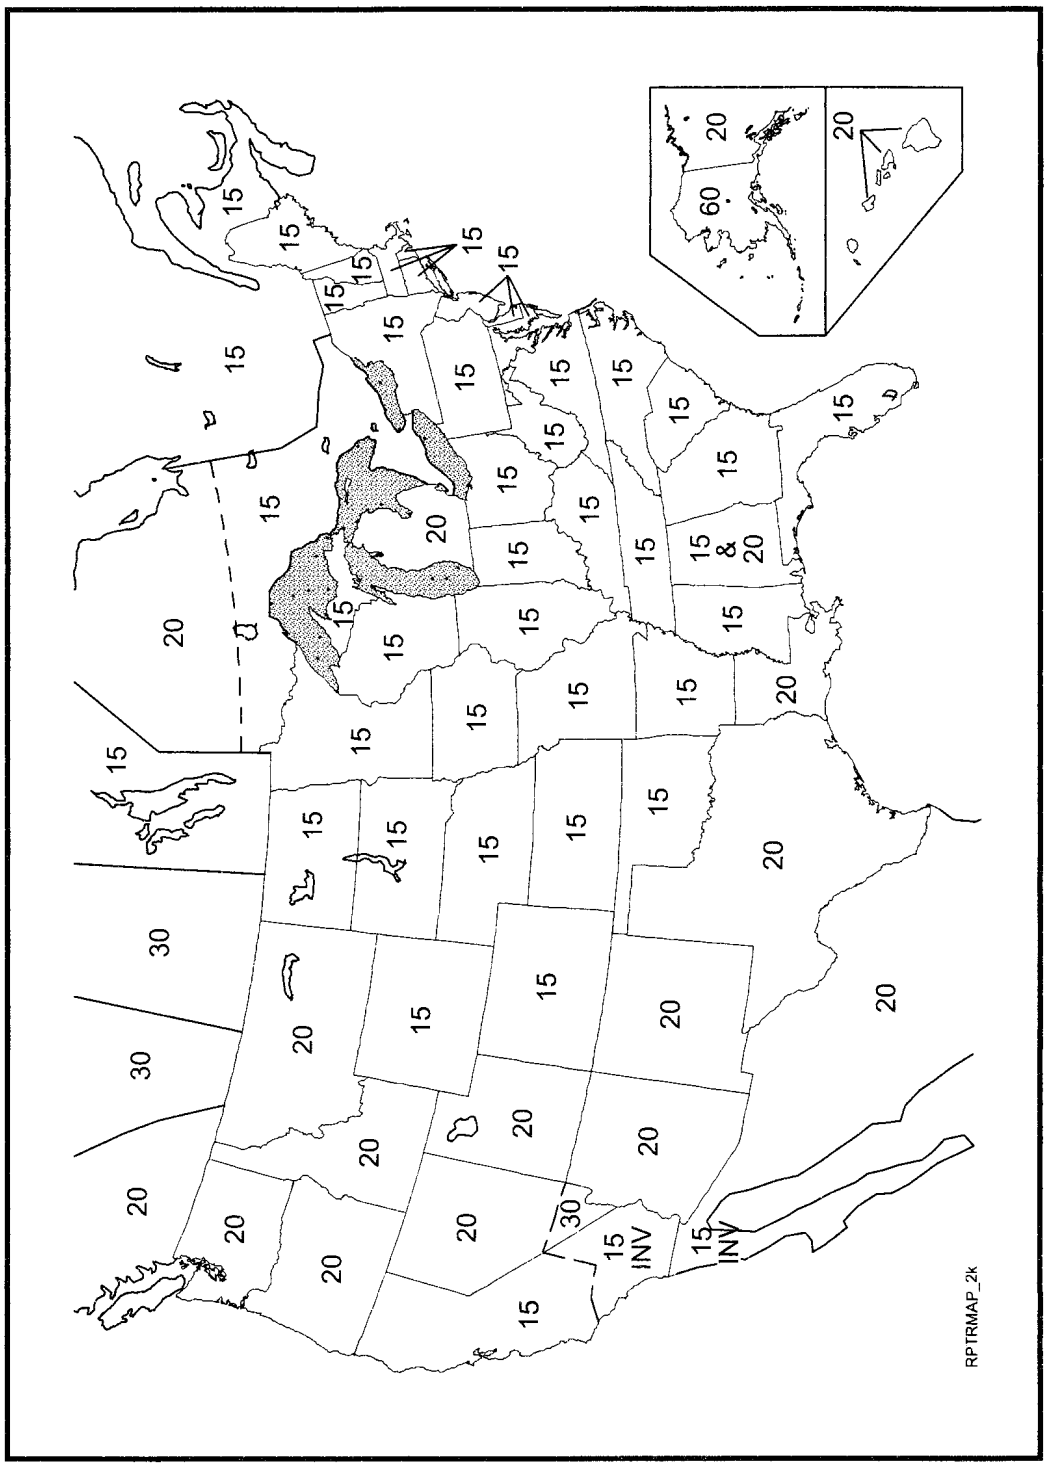

Footnotes

Specific VHF/UHF channels recommended above may not be available in all areas of the US.

Prior to regular packet radio use of any VHF/UHF channel, it is advisable to check with the local frequency coordinator. The decision as to how the available channels are to be used should be based on coordination between local packet radio users.

Some areas use 146.40-146.60 and 147.40-147.60 MHz for either simplex or repeater inputs and outputs.

States use differing channel spacings on the 146-148 MHz band. For further information on which states are currently utilizing which spacing structure see the Offset Map immediately following.

Note: This map shows channel spacing in the US and southern Canada. Spacing is in kHz unless otherwise specified. Please check with your Regional Frequency Coordinator for further information.

The following band plan for 222-225 MHz was adopted by the ARRL Board of Directors in July, 1991.

222-225 MHz

222.00-222.15	Weak signal modes (No repeater operating)
222.00-222.025	EME
222.05-222.060	Propagation beacons
222.1	SSB & CW Calling
222.10-222.150	Weak signal CW & SSB
222.15-222.25	Local coordinator's option: weak signal, ACSB, repeater inputs and control
222.25-223.38	FM repeater inputs only
223.40-223.52	FM simplex
223.50	Simplex calling
223.52-223.64	Digital, packet
223.64-223.70	Links, control
223.71-223.85	Local coordinator's option; FM simplex, packet, repeater outputs
223.85-224.98	Repeater outputs only

Notes: Candidate packet simplex channels shared with FM voice simplex. Check with your local fre-quency coordinator prior to use. Those channels are:

223.42	223.46
223.44	223.48

Footnotes

Specific VHF/UHF channels recommended above may not be available in all areas of the US.

Prior to regular packet radio use of any VHF/UHF channel, it is advisable to check with the local frequency coordinator. The decision as to how the available channels are to be used should be based on coordination between local packet radio users.

420-450 MHz

Please note that this bandplan is a general recommendation. Spectrum usage can be different depending on location and regional coordination differences. Please check with your Frequency Coordinator for information.

420.00-426.00	ATV repeater or simplex with 421.25 MHz video carrier, control links and experimental
426.00-432.00	ATV simplex with 427.25 MHz video carrier frequency
432.00-432.07	EME (Earth-Moon-Earth)
432.07-432.10	Weak signal CW
432.10	Calling frequency
432.10-432.30	Mixed-mode and weak-signal work
432.30-432.40	Propagation beacons
432.40-433.00	Mixed-mode and weak signal work
433.00-435.00	Auxiliary/repeater links
435.00-438.00	Satellite only (internationally)
438.00-444.00	ATV repeater input with 439.250-MHz video carrier frequency and repeater links
442.00-445.00	Repeater inputs and outputs (local option)
445.00-447.00	Shared by auxiliary and control links, repeaters and simplex (local option)
446.00	National simplex frequency
447.00-450.00	Repeater inputs and outputs (local option)

The following packet radio frequency recommendations were adopted by the ARRL Board of Directors in January, 1988.

1) 100-kHz bandwidth channels

430.05	430.35	430.65
430.15	430.45	430.85
430.25	430.55	430.95

2) 25-kHz bandwidth channels

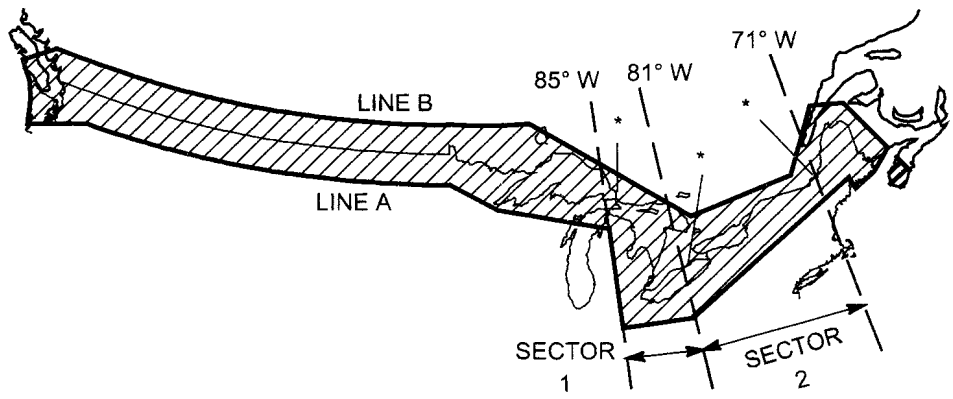

431.025	441.000	441.050
440.975	441.025	441.075

Footnotes

Specific VHF/UHF channels recommended above may not be available in all areas of the US.

Prior to regular packet radio use of any VHF/UHF channel, it is advisable to check with the local frequency coordinator. The decision as to how the available channels are to be used should be based on coordination between local packet radio users.

Line A Restrictions

The band is shared by amateurs with government Radio Location Services (RADAR); amateurs must not interfere with these priority government stations. As part of WARC-79 proceedings, the 420-430 MHz portion of the band was removed from the Amateur Radio Service north of Line "A" (see figure).

In a later action, FCC allocated portions of the band 421-430 MHz to the Land Mobile Service within 50-mile radii centered on Buffalo, Detroit and Cleveland. Amateur stations south of Line "A" in the vicinities of these cities may continue to operate in the 421-430 MHz spectrum as long as they do not cause interference to land mobile or government radio-location users. Additionally, 50-watt PEP output power limitations apply to certain amateurs operating within circles of designated military installations in the US.
See 97.313(f).

902-928 MHz

Please note that this bandplan is a general recommendation. Spectrum usage can be different depending on location and regional coordination differences. Please check with your Frequency Coordinator for information.

902.0-903.0	Weak signal
902.1	Calling frequency
903.0-906.0	Digital
903.1	Alternate calling frequency
906.0-909.0	FM repeater inputs
909.0-915.0	Amateur TV
915.0-918.0	Digital
918.0-921.0	FM repeater outputs
921.0-927.0	Amateur TV
927.0-928.0	FM simplex and links

NOTE: A new bandplan is under development that reflects our need to avoid causing interference to AVM systems at 904-912 MHz and 918-926 MHz.

Notes: Adopted by the ARRL Board of Directors in July, 1989. The following packet radio frequency recommendations were adopted by the ARRL Board of Directors in January, 1988 as interim guidance. Two 3-MHz-bandwidth channels are recommended for 1.5 Mbit/s links. They are 903-906 MHz and 914-917 MHz with 10.7 MHz spacing.

Packet Footnotes

Specific VHF/UHF channels recommended above may not be available in all areas of the US.

Prior to regular packet radio use of any VHF/UHF channel, it is advisable to check with the local frequency coordinator. The decision as to how the available channels are to be used should be based on coordination between local packet radio users.

Canadian amateurs note: *The Amateur Service will continue to have secondary status in the band 902-928 MHz throughout Canada, using any of the following emissions: N0N, A1A, A2A, A3A, A3E, C3F, F1A, F2A, F2B, F1C, F3E.*

Before operating in this band, Canadian amateur licensees are required to consult with their DOC District Office to ensure interference will not be caused to other services operating in the area as per Section 45 of the General Radio Regulations Part II, given in TRC 25.

Government of Canada shipborne radiolocation service is permitted within 150 km of the east and west coasts, Arctic Ocean, Hudson Bay, James Bay and up the St Lawrence River as far as Rimouski on precoordinated channels in the 902-928 MHz band.

Footnotes:

1) Extracts of FCC Rules & Regulations, 97.303(g)(1): No amateur station shall transmit from within the states of Colorado and Wyoming, bounded on the south by latitude 39 degrees North, on the north by latitude 42 degrees North, on the east by longitude 105 degrees West, and on the west by longitude 108 degrees West.(*)

(*) Waived July 2, 1990 to permit amateurs in the restricted areas to transmit in the following segments: 902.0-902.4, 902.6-904.4, 904.7-925.3, 925.7-927.3 and 927.7-928-MHz.

This band is allocated on a secondary basis to the Amateur Service subject to not causing harmful interference to, and not receiving protection from any interference due to the operation of, industrial, scientific and medical devices, automatic vehicle monitoring systems or government stations authorized in this band.

2) Coordinated frequency assignments are required.

3) ATV assignments should be made according to modulation type, e.g. VSB-ATV, SSB-ATV or combinations. Coordination of multiple users of a single channel in a local area can be achieved through isolation by means of cross-polarization and directional antennas.

4) Coordinated assignments at 100 kHz until allocations are filled, then assign 50 kHz until allocations are filled, before assigning 25 kHz channels.

5) Simplex services only; permanent users shall not be coordinated in this segment. High altitude repeaters or other unattended fixed operations are not permitted.

6) Voice and nonvoice operation.

7) Spread-spectrum requires FCC authorization.

8) Consult FCC (97.307) for allowable data rates and bandwidths.

The following band plan was adopted by the ARRL Board of Directors meeting in January, 1985.

1240-1300 MHz

Please note that this bandplan is a general recommendation. Spectrum usage can be different depending on location and regional coordination differences. Please check with your Frequency Coordinator for information.

1240-1246	ATV #1
1246-1248	Narrow-bandwidth FM point-to-point links and digital, duplex with 1258-1260.
1248-1252	Digital Communications
1252-1258	ATV #2
1258-1260	Narrow-bandwidth FM point-to-point links and digital, duplexed with 1246-1252
1260-1270	Satellite uplinks, experimental simplex ATV
1270-1276	Repeater inputs, FM and linear, paired with 1282-1288. (239 pairs, every 25 kHz, e.g. 1270.025, 050, etc.)
1271/1283	Non-coordinated test pair
1276-1282	ATV #3
1282-1288	Repeater outputs paired with 1270-1276
1288-1294	Wide band experimental, simplex ATV
1294-1295	Narrow band FM simplex, 25-kHz channels
1294.50	National FM Simplex calling
1295-1297	Narrow band weak signal (no FM)
1295-1295.80	STV, FAX, ACSSB experimental
1295.8-1296	Reserved for EME, CW expansion
1296-1296.05	EME exclusive
1296.07-1296.08	CW beacons

1296.1	CW/SSB calling frequency
1296.40-1296.60	Crossband linear translator input
1296.60-1296.80	Crossband linear translator output
1296.80-1297.00	Experimental beacons (exclusive)
1297-1300	Digital communication

Notes: The following packet radio frequency recommendations were adopted by the ARRL Board of Directors in January, 1988.

1) 2-MHz-bandwidth channels at:

1249.00 1251.00 1298.00

2) 100-kHz-bandwidth channels

1299.05 1299.45 1299.75
1299.15 1299.55 1299.85
1299.25 1299.65 1299.95
1299.35

3) 25-kHz-bandwidth channels

1294.025 1294.125
1294.050 1294.150
1294.075 1294.175
1294.100 National packet simplex calling

Footnotes

1) Deleted

2) Coordinated assignments required

3) ATV assignments should be made according to modulation type (for example, VSB-ATV, SSB-ATV or combinations). Coordination of multiple users of a single channel in a local area can be achieved through isolation by means of cross polarization and directional antennas. DSB ATV may be used, but only when local and regional activity levels permit. The excess bandwidths from such users are secondary to the assigned services.

4) Coordinate assignments with 100-kHz channels, beginning at the lower end of the segment until allocations

are filled, then assign
50-kHz channels until allocations are filled before assigning 25-kHz channels.

5) Wide bandwidth experimental users are secondary to the satellite service and may be displaced upon the installation of any new satellites. Users are EIRP-limited to the noise floor of the satellites in service and may suffer interference from satellite uplinks.

6) Simplex services only: permanent users shall not be coordinated in this segment. High altitude repeaters or other unattended fixed operations are not permitted.

7) Voice and nonvoice operations.

8) Consult 47 CFR 97.307 for allowable data rates and bandwidths.

9) Provide guard bands at the higher frequency end of segments, as required, to avoid interference to ATV.

10) 1274.0-1274.2 and 1286.0-1286.2 MHz are optionally reserved for contiguous Linear Translators supporting multiple narrow bandwidth users. These may also be duplexed with other noncoordinated band segments.

The following band plan was adopted by the ARRL Board of Directors in January, 1991.

2300-2310 and 2390-2450 MHz

Please note that this bandplan is a general recommendation. Spectrum usage can be different depending on location and regional coordination differences. Please check with your Frequency Coordinator for information.

2300-2303	High-rate data
2303-2303.5	Packet radio
2303.5-2303.8	TTY, packet
2303.8-2303.9	Packet, TTY, CW, EME
2303.9-2304.1	CW, EME
2304.1-2304.2	CW, EME, SSB
2304.2-2304.3	SSB, SSTV, FAX, Packet, AM, AMTOR
2304.3-2304.32	Propagation beacon network
2304.32-2304.4	General propagation beacons
2304.4-2304.5	SSB, SSTV, ACSSB, FAX, Packet, AM, AMTOR experimental
2304.4	Calling frequency
2304.5-2304.7	Crossband linear translator input
2304.7-2304.9	Crossband linear translator output
2304.9-2305	Experimental beacons
2305-2305.2	FM simplex (25-kHz spacing)
2305.2	FM simplex calling frequency
2305.2-2306	FM simplex (25-kHz spacing)
2306-2309	FM repeaters (25-kHz) input
2309-2310	Control and auxiliary links
2390-2396	Fast-scan TV
2396-2399	High-rate data
2399-2399.5	Packet
2399.5-2400	Control and auxiliary links

2400-2403	Satellite
2403-2408	Satellite high-rate data
2408-2410	Satellite
2410-2413	FM repeaters (25-kHz spacing) output
2413-2418	High-rate data
2418-2430	Fast-scan TV
2430-2433	Satellite
2433-2438	Satellite high-rate data
2438-2450	Wideband FM, FSTV, FMTV, SS experimental

3300-3500 MHz

The following beacon subband was adopted by the ARRL Board of Directors in July, 1988.

3456.3-3456.4 Propagation beacons

5650-5925 MHZ

The following beacon subband was adopted by the ARRL Board of Directors in July, 1988.

5760.3-5760.4 Propagation beacons

10.000-10.500 GHZ

The following subband recommendation was adopted by the ARRL Board of Directors in January, 1987

10.368.1 GHz Narrow-band calling frequency

The following beacon subband was adopted by the ARRL Board of Directors in July, 1988.

10368.3-10368.4 Propagation beacons

CHAPTER THREE

REPEATER LISTINGS-
COMMITTEES & COORDINATORS

Within the confines of this chapter you will find a description of repeater listing procedures, how and why repeaters are registered, and listings of Regional Frequency Coordinators. Also included for your information is a list of the ARRL Officers.

As you can imagine, many changes occur to the Frequency Coordinator's list during the course of the year. For the most current contact information of the Frequency Coordinator in your area, visit the ARRL Web site at: **www.arrl.org/nfcc**.

REPEATER LISTINGS

All repeater listings in the *Repeater Directory* are provided by regional frequency coordinators. Except for minor editorial changes and shuffling of field locations, all data appears exactly as it was submitted by the coordinator. If you notice any errors or omissions, please notify your frequency coordinator.

Repeater listings are accurate to the best of our ability; however, no guarantee of accuracy is made or implied. The listing of a repeater in the Repeater Directory does not imply that the listed repeater has any greater legal status than any other amateur station.

REPEATER REGISTRATION

Repeater registration and updates are necessary in order to compile a current and accurate *Repeater Directory*. In some cases the changes only involve the addition or deletion of a specialized feature—in other cases it may involve a frequency or location change. Your Frequency Coordinator is in charge of seeing to it that this updated information is provided to the *Repeater Directory* in a timely manner for publication.

Please note that all repeater registration is carried out through Frequency Coordinators.

FREQUENCY COORDINATORS

The ARRL is not a Frequency Coordinator, nor does the ARRL "certify" coordinators. Frequency Coordinators are volunteers normally appointed by a coordinating body. The ARRL *Repeater Directory* reports only the fact of coordination or non-coordination as instructed by the coordinating body. Publication in the Repeater Directory does not constitute nor imply endorsement or recognition of the authority of such coordinators, as coordinators derive their authority from the voluntary participation of the entire amateur community in the areas they serve.

In some cases the person or group listed only compiles the information for listings in the Repeater Directory. In other cases the listed individual or group offers guidance but not coordination.

Frequency Coordinators keep extensive records of repeater input, output and control frequencies, including those not published in directories (at the owner's request). The coordinator will recommend frequencies for a proposed repeater in order to minimize interference with other repeaters and simplex operations. Therefore, anyone considering the installation of a repeater should check with the local frequency coordinator prior to such installation.

The following is a listing of groups or individuals for the United States and Canada who are active in Frequency Coordination and are acknowledged, by virtue of the recognition accorded them by the entire amateur community they serve, as the sole Frequency Coordinators in their respective jurisdictions.

CHAPTER FOUR

REPEATER LINGO / HINTS

This chapter covers a basic course in "repeater-speak" and explains many of the terms heard on your local repeater.

REPEATER LINGO:

Definitions of the words and phrases commonly used on repeaters:

Autopatch - A device that interfaces the repeater system with the telephone system to extend ham communications over the telephone communications network.

Breaker - A ham who interjects his call sign during a QSO in an attempt to get a chance to communicate over a repeater.

Channel - The pair of frequencies (input and output) a repeater operates on.

Closed Repeater - A repeater whose use is limited to certain individuals. These are completely legal under FCC rules.

Control Operator - An individual ham designated to "control" the repeater, as required by FCC regulations.

COR - Carrier-Operated-Relay, a device that, upon sensing a received signal, turns on the repeater's transmitter to repeat the received signal.

Courtesy Tone - A short tone sounded after each repeater transmission to permit other stations to gain access to the repeater before the tone sounds.

Coverage - The geographical area in which the repeater may be used for communications.

CTCSS - Continuous Tone Coded Squelch System, a sub-audible tone system which operates the squelch (COR) of a repeater when the corresponding sub-audible tone is present on a transmitted signal. The squelch on a repeater which uses CTCSS will not activate if the improper CTCSS tone, or if no tone, is transmitted.

Crossband - Communications to another frequency band by means of a link interfaced with the repeater.

Desense - Degradation of receiver sensitivity caused by strong unwanted signals reaching the receiver front end.

Duplexer - A device that permits the use of one antenna for both transmitting and receiving with minimal degradation to either the incoming or outgoing signals.

Frequency Synthesis - A scheme of frequency generation in modern transceivers using digital techniques.

Full Quieting - Signal strength in excess of amount required to mask ambient noise.

Hand-Held - A portable FM transceiver that is small enough to use and carry in one hand.

Input - The frequency the repeater receiver is tuned to: The frequency that a repeater user transmits on.

Intermod - Interference caused by spurious signals generated by intermodulation distortion in a receiver front end or transmitter power amplifier stage.

Key-Up - Turning on a repeater by transmitting on its input frequency.

LiTZ - Long Tone Zero (LiTZ) Alerting system. Send DTMF zero (0) for at least three seconds to request emergency/urgent assistance.

Machine - The complete repeater system.

Mag-Mount - A mobile antenna with a magnetic base that permits quick installation and removal from the motor vehicle.

Offset - The spacing between a repeater's input and output.

Omnidirectional - An antenna system that radiates equally in all directions.

Output - The frequency the repeater transmits on; the frequency that a repeater user receives on.

Picket-Fencing - Rapid flutter on a mobile signal as it travels past an obstruction.

Polarization - The plane an antenna system operates in; most repeaters are vertically polarized.

Reverse Autopatch - A device that interfaces the repeater with the telephone system and permits users of the phone system to call the repeater and converse with on-the-air repeater users.

Reverse Split - A split-channel repeater operating in the opposite direction of the standard.

RPT/R - Abbreviation used after repeater call signs to indicate that the call sign is being used for repeater operation.

Simplex - Communication on one frequency, not via a repeater

Splinter Frequency - 2-meter repeater channel
15 kHz above or below the formerly standard 30 kHz-spaced channel.

Split Sites - The use of two locations for repeater operation (the receiver is at one site and the transmitter at another), and the two are linked by telephone or radio.

Squelch Tail - The noise burst that follows the short, unmodulated carrier following each repeater transmission.

Time-Out-Timer - A device that limits the length of a single repeater transmission (usually 3 minutes).

Tone Pad - A device that generates the standard telephone system tones used for controlling various repeater functions.

ARRL MESSAGE FORM INSTRUCTIONS

Every formal radiogram message originated and handled should contain the following four main components in the order given.

1. Preamble

The Preamble includes information used to prioritize and track the message and ensure its accuracy.

(A) Number. Assigned by the Station of Origin and never changed. Begin with 1 each month or year.

(B) Precedence. Determines the order in which traffic is passed. Assign each message a Precedence of R (Routine), W (Welfare), P (Priority) or EMERGENCY. See the guidelines on page 76.

(C) Handling Instructions (HX). Optional, used only if a specific need is present.

(D) Station of Origin. The call sign of the station originating (creating) the message.

(E) Check. The number of words or word groups in the text of the message. A word group is any group of one or more consecutive characters with no interrupting spaces.

(F) Place of Origin. The location (city and state) of the party for whom the message was created, and not necessarily the location of the Station of Origin.

(G) Time Filed. Optional, used only when the filing time has some importance relative to the Precedence, Handling Instructions or Text.

(H) Date. The date the message was filed. (If Time Filed is used, date and time must agree.)

2. Address

Name, address, city, state, ZIP and telephone number of the intended recipient, as complete as possible. Note that punctuation is not used in the Address section.

3. Text

The message information, limited to 25 words or less if possible. Normal punctuation characters are not used in the text. A question mark is sent as QUERY, while DASH is sent for a hyphen. The letter X is used as a period (but never after the last group of the text) and counts as a word when figuring the Check. The letter R is used in place of a decimal in mixed figure groups (example: 146R52 for 146.52).

4. Signature

The name of the party for whom the message was originated. May include additional information such as Amateur Radio call sign, title, address, phone number and so on.

Message Example

1. Preamble	1	R	HXG	W1AW	8	NEWINGTON CT	1830Z	JULY 1
	(A)	(B)	(C)	(D)	(E)	(F)	(G)	(H)

2. Address
DONALD SMITH
164 EAST SIXTH AVE
NORTH RIVER CITY MO 00789
555 1234

3. Text
HAPPY BIRTHDAY X SEE YOU SOON X LOVE

4. Signature
DIANA

ARRL MESSAGE PRECEDENCES

EMERGENCY—Any message having life and death urgency to any person or group of persons, that is transmitted by Amateur Radio in the absence of regular commercial facilities. This includes official messages of welfare agencies during emergencies requesting supplies, materials or instructions vital to relief efforts for the stricken populace in emergency areas. On CW and digital modes, this designation will always be spelled out. *When in doubt, do not use this designation.*

PRIORITY—Abbreviated as P on CW and digital modes. This classification is for important messages having a specific time limit, official messages not covered in the emergency category, press dispatches and emergency-related traffic not of the utmost urgency.

WELFARE—Abbreviated as W on CW and digital modes. This classification refers to an inquiry about the health and welfare of an individual in the disaster area, or to an advisory from the disaster area that indicates all is well. Welfare traffic is handled only after all Emergency and Priority traffic is cleared. The Red Cross equivalent to an incoming Welfare message is DWI (Disaster Welfare Inquiry).

ROUTINE— Abbreviated as R on CW and digital modes. Most traffic in normal times will bear this designation. In disaster situations, traffic labeled Routine should be handled last, or not at all when circuits are busy with higher-precedence traffic.

ARRL MESSAGE HANDLING INSTRUCTIONS

Handling instructions (HX) convey special instructions to operators handling and delivering the message. The instruction is inserted in the message Preamble between the Precedence and the Station of Origin. Its use is optional with the originating stations, but once inserted it is mandatory with all relaying stations.

PROSIGN	INSTRUCTION
HXA	(Followed by number.) Collect landline delivery authorized by addressee within _____ miles. (If no number, authorization is unlimited.)
HXB	(Followed by number.) Cancel message if not delivered within _____ hours of filing time; service originating station.
HXC	Report date and time of delivery (TOD) to originating station.
HXD	Report to originating station the identity of station from which received, plus date and time. Report identity of station to which relayed, plus date and time, or if delivered report date, time and method of delivery.
HXE	Delivering station get reply from addressee, originate message back.
HXF	(Followed by number.) Hold delivery until _____ (date).
HXG	Delivery by mail or landline toll call not required. If toll or other expense involved, cancel message and service originating station.

ARRL NUMBERED RADIOGRAMS FOR POSSIBLE "RELIEF EMERGENCY USE"

Numbered radiograms are an efficient way to convey common messages. The letters ARL are inserted in the Preamble in the Check and in the text before spelled out numbers, which represent texts from this list. Note that some ARL texts include insertion of information.

Example: NR 1 W W1AW ARL 4 NEWINGTON CT DEC 25 DONALD R SMITH 164 EAST SIXTH AVE NORTH RIVER CITY MO PHONE 733 3968 BT ARL ONE ARL TWO BT DIANA AR.

ONE	Everyone safe here. Please don't worry.
TWO	Coming home as soon as possible.
THREE	Am in _____ hospital. Receiving excellent care and recovering fine.
FOUR	Only slight property damage here. Do not be concerned about disaster reports.
FIVE	Am moving to new location. Send no further mail or communication. Will inform you of new address when relocated.
SIX	Will contact you as soon as possible.
SEVEN	Please reply by Amateur Radio through the amateur delivering this message. This is a free public service.
EIGHT	Need additional _____ mobile or portable equipment for immediate emergency use.
NINE	Additional _____ radio operators needed to assist with emergency at this location.

TEN	Please contact _____. Advise to standby and provide further emergency information, instructions or assistance.
ELEVEN	Establish Amateur Radio emergency communications with _____ on _____ MHz.
TWELVE	Anxious to hear from you. No word in some time. Please contact me as soon as possible.
THIRTEEN	Medical emergency situation exists here.
FOURTEEN	Situation here becoming critical. Losses and damage from _____ increasing.
FIFTEEN	Please advise your condition and what help is needed.
SIXTEEN	Property damage very severe In this area.
SEVENTEEN	REACT communications services also available. Establish REACT communication with _____ on channel _____.
EIGHTEEN	Please contact me as soon as possible at _____.
NINETEEN	Request health and welfare report on _____(name, address, phone).
TWENTY	Temporarily stranded. Will need some assistance. Please contact me at _____.
TWENTY ONE	Search and Rescue assistance is needed by local authorities here. Advise availability.

TWENTY TWO	Need accurate information on the extent and type of conditions now existing at your location. Please furnish this information and reply without delay.
TWENTY THREE	Report at once the accessibility and best way to reach your location.
TWENTY FOUR	Evacuation of residents from this area urgently needed. Advise plans for help.
TWENTY FIVE	Furnish as soon as possible the weather conditions at your location.
TWENTY SIX	Help and care for evacuation of sick and injured from this location needed at once.

BE KING OF THE HAM WORLD

(WORLD BANDS, THAT IS)

IC-7800

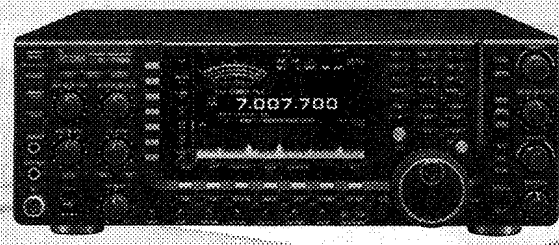

Both have...

- HF + 6M
- 200W (50W AM), Full Duty Cycle
- RX: 0.030–60.000MHz*
- At least two 32 Bit IF-DSPs + 24 Bit AD/DA Converters
- +40dBm 3rd Order Intercept Point
- Selectable, "Build Your Own" IF Filters Shapes

So what's the difference?

The 7800 has 2 built-in independent receivers. The 7700 has one, and makes a great run rig to add to your station.

IC-7700

ICOM 2M RIGS

IC-2200H D-STAR Optional

DIGITAL UPGRADEABLE FOR 2M

65 Watt | 207 Alphanumeric Memory Channels | Digital Voice & Data w/Optional UT-118 | Optional Callsign Squelch | CTCSS & DTCS Encode/Decode w/Tone Scan

D-STAR Optional

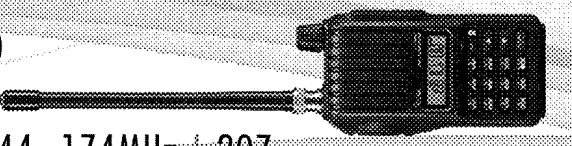

IC-V8000

2M TRANSCEIVER

75 Watt | Wide RX: 136–174MHz* | 207 Alphanumeric Memory Channels Icom's DMS Scanning | CTCSS Encode/Decode with Tone Scan | Weather Channels Scan with Alert

NEW IC-V80

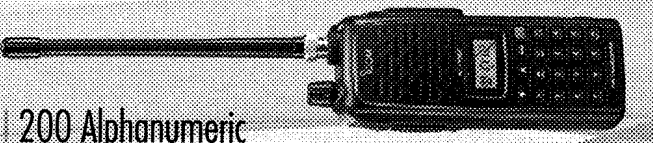

CLASSIC + RUGGED 2M

5.5/2.5/0.5 Watt | RX: 144–174MHz | 207 Alphanumeric Memory Channels | CTCSS & DTCS Tone Scan Internal VOX | Modern Performance with Classic Look

IC-V82

2M ANALOG FUN

7W | RX: 136–174MHz | 200 Alphanumeric Memory Channels | Built-in CTCSS/DTCS

D-STAR Optional

COLORADO REPEATER ASSOCIATION

SUPPORT AMATEUR RADIO

COLORADO REPEATER ASSOCIATION, Inc.
POST OFFICE BOX 1013
PARKER, COLORADO 80134

http://www.w0cra.org
e-mail: cra@w0cra.org
303-840-4CRA

The Colorado Repeater Association's (CRA) membership welcomes all amateurs to the state of Colorado. The CRA's ragchew repeaters are open to all hams. Please feel free to access and use the CRA frequencies listed above. Our repeaters require a 107.2 CTCSS tone for access.

Join our information Net every Sunday at 9 a.m. for license exam info, the NewsLine Report, the Swap Net, a swapfest schedule and much more. CRA repeaters host various special interest nets covering AMSAT, ARES, EOSS, QRP, scanning and other topics. There is also IRLP access for members.

Five of the CRA's repeaters have Colorado Statewide autopatch capabilities. Ask any CRA member to dial a local or emergency number for you.

The CRA repeaters cover 275 miles along Interstate 25 and 100 miles along Interstate 70 providing coverage in Denver, Colorado Springs, Pueblo, Boulder, Longmont, Greeley, Fort Collins and Cheyenne.

Many of the CRA systems are linked for additional coverage. Ask on-air for details.

73 – THE CRA HOPES YOU SAFELY ENJOY COLORADO

Serving The Amateur Radio Community Since 1965

Our 45th Year

LIMARC

Long Island Mobile Amateur Radio Club

The **Long Island Mobile Amateur Radio Club** is an ARRL Affiliated Special Service Club, serving the Amateur Radio community since 1965 and is one of the largest Amateur Radio clubs in the USA. We are a nonprofit organization, dedicated to the advancement of Amateur Radio, public service and assistance to fellow amateurs.

LIMARC operates five repeaters, all using a 136.5 PL.

Repeater Frequencies
W2VL 146.850- IRLP Node 4438
Can only be accessed through the 9126 IRLP Reflector Node.
W2VL 1288.00-
W2KPQ 449.125- IRLP Node 4969
W2KPQ 147.375+ IRLP Node 4478
W2KPQ 224.820-

Weekly Nets

Technical Net: Sunday @ 8:00 PM

Club Info Net: Monday @ 8:30 PM followed by the **Swap & Shop Net**

Computer Net: 3rd and 4th Wednesday of each month @ 8:30 PM (to 10:00 PM)

Note: All Nets are linked between the 146.850 and 147.375 Repeaters

Repeater Trustees
W2VL: W2QZ, **W2KPQ:** WB2WAK

Special Events Callsign WV2LI; Trustee N2GA

Some of LIMARC's regular activities are

General Meetings: 2nd Wednesday (except July and August) at Levittown Hall, Hicksville, NY @ 8:00 PM
VE Tests: 2nd Saturday in odd numbered months at Levittown Hall – check our web-site for times
Hamfests: Winter, Spring & Fall
License Classes and **Field Day**

LIMARC Officers
President: Richie Cetron K2KNB **Vice President:** Joe Lane KC2JON
Secretary: Don Kane WB2BEZ **Treasurer:** Jerry Abrams WB2ZEX
Past President: Rick Bressler K2RB
Directors: Bob Batchelor W2OSR, Al Bender W2QZ, Harry Gross KC2FYJ, Ken Gunther WB2KWC, Joe Schierer KC2BZB, Harry Schrader WB2H

For more information on current LIMARC events:
Access LIMARC on the world wide web:
http://www.limarc.org or e-mail us at: **limarc@limarc.org**
Write: **LIMARC, P.O. Box 392, Levittown, NY 11756**

D-STAR'S LIGHTING UP 70CM

IC-80AD D-STAR ready

5 Watt Output Power | 2M/70CM, V/U Switchable Dual Band | RX: 0.495–999.99MHz* | 3G D-STAR Interface
Shown with Optional GPS Mic

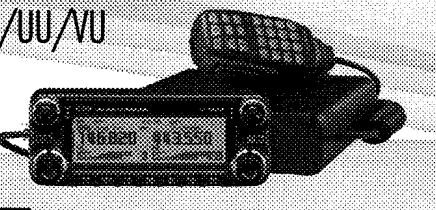

IC-92AD D-STAR ready

5 Watt Output Power | 2M/70CM | 1304 Alphanumeric Memory Channels | RX: 0.495–999.99MHz* | IPX7 | Optional GPS Mic

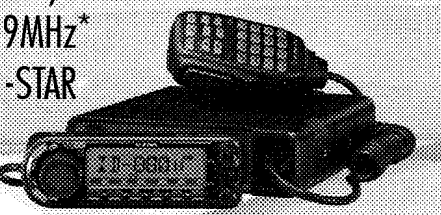

IC-2820H D-STAR optional

50 Watt (VHF/UHF) | Wide RX: 118–549.995, 810–999MHz*
522 Alphanumeric Memory Channels | VV/UU/VU Operation | Removeable Control Head
Optional D-STAR/GPS Unit (UT-123)

ID-880H D-STAR ready

50 Watt Output Power | 2M/70CM, V/U or U/V Switchable Dual Band Wide | RX: 118–999MHz*
800 Alphanumeric Memory Channels | 3G D-STAR

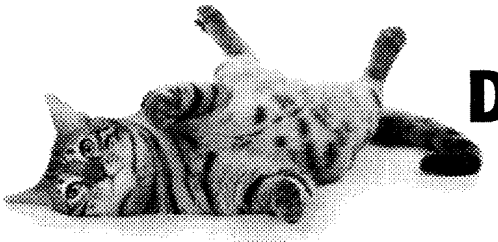

D'PRS™

ICOM®

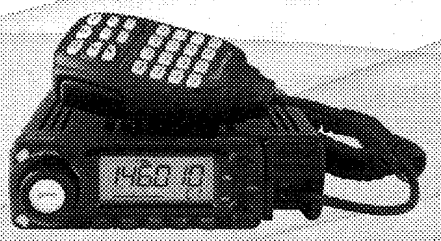

PURRRFECT DUAL BANDERS!

2M/70CM

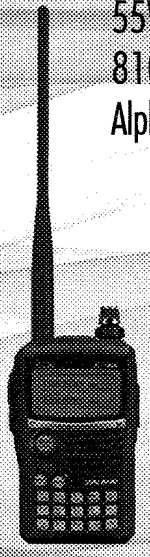

NEW IC-T70A

5/2.5/0.5 Watts Output Power ¦ RX: 136–174, 400–479MHz* ¦ 302 Alphanumeric Memory Channels 700mW Loud Audio ¦ Ni-MH 7.2V/1400mAh Battery

IC-208H

55W (VHF), 50W (UHF) ¦ Wide RX: 118–173, 230–549, 810–999MHz* ¦ Wide/Narrow Band Switchable ¦ 512 Alphanumeric Memory Channels ¦ Selectable Display Color

IC-91A D-STAR Optional

5 Watt Output Power ¦ 2M/70CM ¦ 1300 Alphanumeric Memory Channels ¦ RX: 0.495–999.99MHz* (Cellular Blocked) ¦ D-STAR Digital Voice & Data Ready One Touch Reply ¦ Voice Recorder & Auto Reply

ICOM®

WORK THE WORLD.
WORK THE BIRDS.

WORK JUST ABOUT EVERYTHING.

Get on the air with Icom's latest base station covering HF/6M/2M/70CM/23CM*! 100W on HF/6M/2M, 75W on 70CM, and 10W on 23CM* will cover SSB, CW, RTTY, AM, FM, Satellite, and D-STAR DV modes**, making the IC-9100 one of the most versatile base stations to come to the Amateur world.

NEW IC-9100H

VHF/UHF SATELLITE + HF/50MHz + D-STAR DV

100W (HF/6M/2M), 75W (70CM), 10W (23CM)* ¦ SSB, CW, RTTY, AM, FM, Satellite, & DV Modes** ¦ 32-bit Floating Point DSP & 24-bit AD/DA Converter ¦ Opt. 3kHz/6kHz 1st IF Roofing Filters

www.icomamerica.com

This device has not been approved by the FCC. This device may not be sold, leased, or be offered for sale or lease, until approval by the FCC has been obtained. *Optional UX-9100 required. **Optional D-STAR unit required. Some restrictions may be applied in combination with operating frequency and DV mode.

IRLP Repeaters

The following is a list of repeaters in the US and Canada that are interconnected through the Internet Radio Linking Project (IRLP). For more information, see **irlp.net**.

Our thanks to Dave Cameron, VE7LTD, for providing this information.

EchoLink Repeaters

The following is a list of repeaters in the United States and Canada that provide EchoLink capability. For more information about EchoLink, see **www.echolink.org**.

Our thanks to Jonathan Taylor, K1RFD, for providing this information.

WiRES-II Repeaters

A number of Vertex Standard (Yaesu) WiRES-II—Wide-coverage Internet Repeater Enhancement System—nodes are available for public access. WiRES-II is a technique of using Internet VoIP technology to link two repeaters or home stations, across a country or across a continent. Nonproprietary DTMF signaling is used to establish the Internet link. For more information on the Web, see **www.vxstd.com/en/wiresinfo-en/**.

VX-8DR

A Devoted APRS® Users Version of the VX-8R Series

The optional GPS Antenna Unit FGPS-2 can be either directly attached to the radio using the microphone input jack or to the optional external microphone MH-74A7A.

•Shown with the optional FGPS-2 GPS Antenna and the optional CT-136 Adapter.

Key Addional APRS® Features of the VX-8DR include

- SmartBeaconing™ Function: When using APRS® for position tracking, the beacon timing is automatically adjusted to your traveling speed and location to plot a smoother trace to match your position and movement on a map.
- The number of Station List memories has increased from 40 to 50.
- The number of APRS® Message memories has increased from 20 to 30.
- DIGI-PATH route indication function: The APRS® Packet data includes Digipeater routing info.
- Heads up compass display to the GPS Screen: Your traveling direction is always toward the top of the display.
- The Message received LED flashing rate is selectable.

50/144/(222)*/430 MHz
FM 5 W/AM 1 W(50 MHz) Triple Band Handheld

VX-8DR

*222 MHz: 1.5 W (USA version)

* SmartBeaconing™ from HamHUD Nichetronix
APRS® is a registered trademark of Bob Bruninga WB4APR.
